ROOTED IN QUALITY, SERVICE, AND TECHNOLOGY

With a focus on quality, service, and technology, The Andersons strives to provide products designed to make work easier, more efficient, and most effective to achieve the highest yields. From a broad range of fertilizers, micronutrients, soil amendments, and organic nutrients, to patented products and technologies, we are committed to delivering next-generation solutions with the highest level of quality and customer service in the industry.

The Andersons, Inc. was founded in 1947 in Maumee, Ohio, and is currently a fifteen billion dollar corporation (NASDAQ:ANDE). The company also conducts business in the commodity merchandising and renewable sectors.

STEWARDSHIP AND SUSTAINABILITY

The Andersons has long recognized that operating sustainably is essential to achieving our vision of being the most nimble and innovative North American ag supply chain company.

We are an active participant and partner of the 4R Nutrient Stewardship program. The 4Rs provide a fertilizer application framework focused on using the Right Source of nutrients at the Right Rate, at the Right Time, and in the Right Place, maximizing crop uptake of nutrients while minimizing nutrient loss.

The Andersons is also aligned and active with the ResponsibleAg organization. ResponsibleAg is an industry-led stewardship organization helping to ensure members are compliant with environmental, health, safety, and security regulations.

Visit **AndersonsPlantNutrient.com/AgSustainability** to learn more about The Andersons initiatives to drive stewardship and sustainability in the communities we serve.

PROVEN BY RESEARCH

The Andersons works to ensure our products provide excellent and consistent performance on the farm as well as deliver a positive return on investment. To ensure this, we perform numerous field trials each year to evaluate effectiveness, rates, timing, and more.

Research trials are managed through multiple channels including third-party research sites, on-farm trials through independent dealers and distributors, Beck's Hybrids, and Precision Planting. Results from these trials are published in our own Research Guide.

To view our Research Guide, visit **AndersonsPlantNutrient.com/AgResearch**.

PFR PROVEN™

BECK'S

"For a product or practice to become PFR Proven, it needs to have been tested for a minimum of three years at multiple locations, it must provide a positive yield gain each year, and it must average a positive return on investment over the three-year period."

- Beck's PFR Book 2020, page 11

THE ANDERSONS PFR PROVEN PRODUCTS

	PUREGRADE® DIAMOND 6-24-6	MICROCARB®	FIRST PASS® WITH MICROCARB®	MICROBLITZ®	PHOSFIX®
Crop	Corn	Corn	Soybeans	Soybeans	Corn
Average Return on Investment*	$12.78	$11.44	$9.19	$16.70	$5.45
Average Yield Increase	8.2 bu/ac	4.0 bu/ac	2.7 bu/ac	1.9 bu/ac	2.8 bu/ac
Application	5 gal in-furrow	1 qt in-furrow	2 gal in-furrow	1 qt at R1	1 pt at V4

Average Return on Investment was calculated using the methods highlighted in the Beck's 2020 PFR Book (page 9). Corn: $3.72/bu. Soybeans: $9.13/bu. Return on Investment = Bu/A difference x commodity price/bu – treatment cost.

CREATE A SEASON-LONG APPROACH

Get ahead with solutions created by agronomists at The Andersons. Our team identified what specific crops need throughout the growing season and created flexible programs designed to meet budget and nutritional needs at various growth stages to maximize yields.

Download The Andersons High Yield programs at **AndersonsPlantNutrient.com/HighYield**.

HIGH YIELD SOLUTIONS AVAILABLE FOR:

- Corn
- Cucurbits
- Dry Beans
- Green Beans
- Organic Corn
- Organic Potatoes
- Organic Tomatoes
- Potatoes
- Soybeans
- Sugar Beets
- Sweet Corn
- Wheat

NUTRIENT ROLES

PRIMARY NUTRIENTS	SECONDARY NUTRIENTS	MICRONUTRIENTS	CARBON

Primary nutrients, secondary nutrients, micronutrients, and carbon are essential for crop development. Each is important to the plant, yet required in vastly different amounts.

NITROGEN (N)
- Promotes chlorophyll production which is essential for photosynthesis
- Increases protein content
- Moves to root surfaces for absorption due to its mobility

PHOSPHORUS (P)
- Captures and converts the sun's energy
- Stimulates root development
- Increases stalk and stem strength
- Improves flower formation and seed production

POTASSIUM (K)
- Enhances enzyme actions aiding in photosynthesis
- Produces grains rich in starch
- Increases root growth and improves drought tolerance
- Reduces water loss and wilting

CALCIUM (Ca)
- Helps form cell walls to strengthen the plant
- Stimulates root and leaf development
- Affects uptake and activity of other nutrients

MAGNESIUM (Mg)
- Acts as a phosphorus carrier
- Improves root growth
- Required for better root formation and thus better nutrient/water efficiency

SULFUR (S)
- Exists in every living cell
- Important in photosynthesis and winter crop hardiness
- Required for synthesis of certain amino acids and proteins
- Necessary for efficient nitrogen fixation in legumes

Source: CropNutrition.com

BORON (B)
- Improves seed set under stressful conditions
- Aids in development of cell walls to increase plant stability

COPPER (Cu)
- Not easily accessed due to its immobility in the soil system
- Necessary to chlorophyll formation
- Catalyzes several other plant reactions

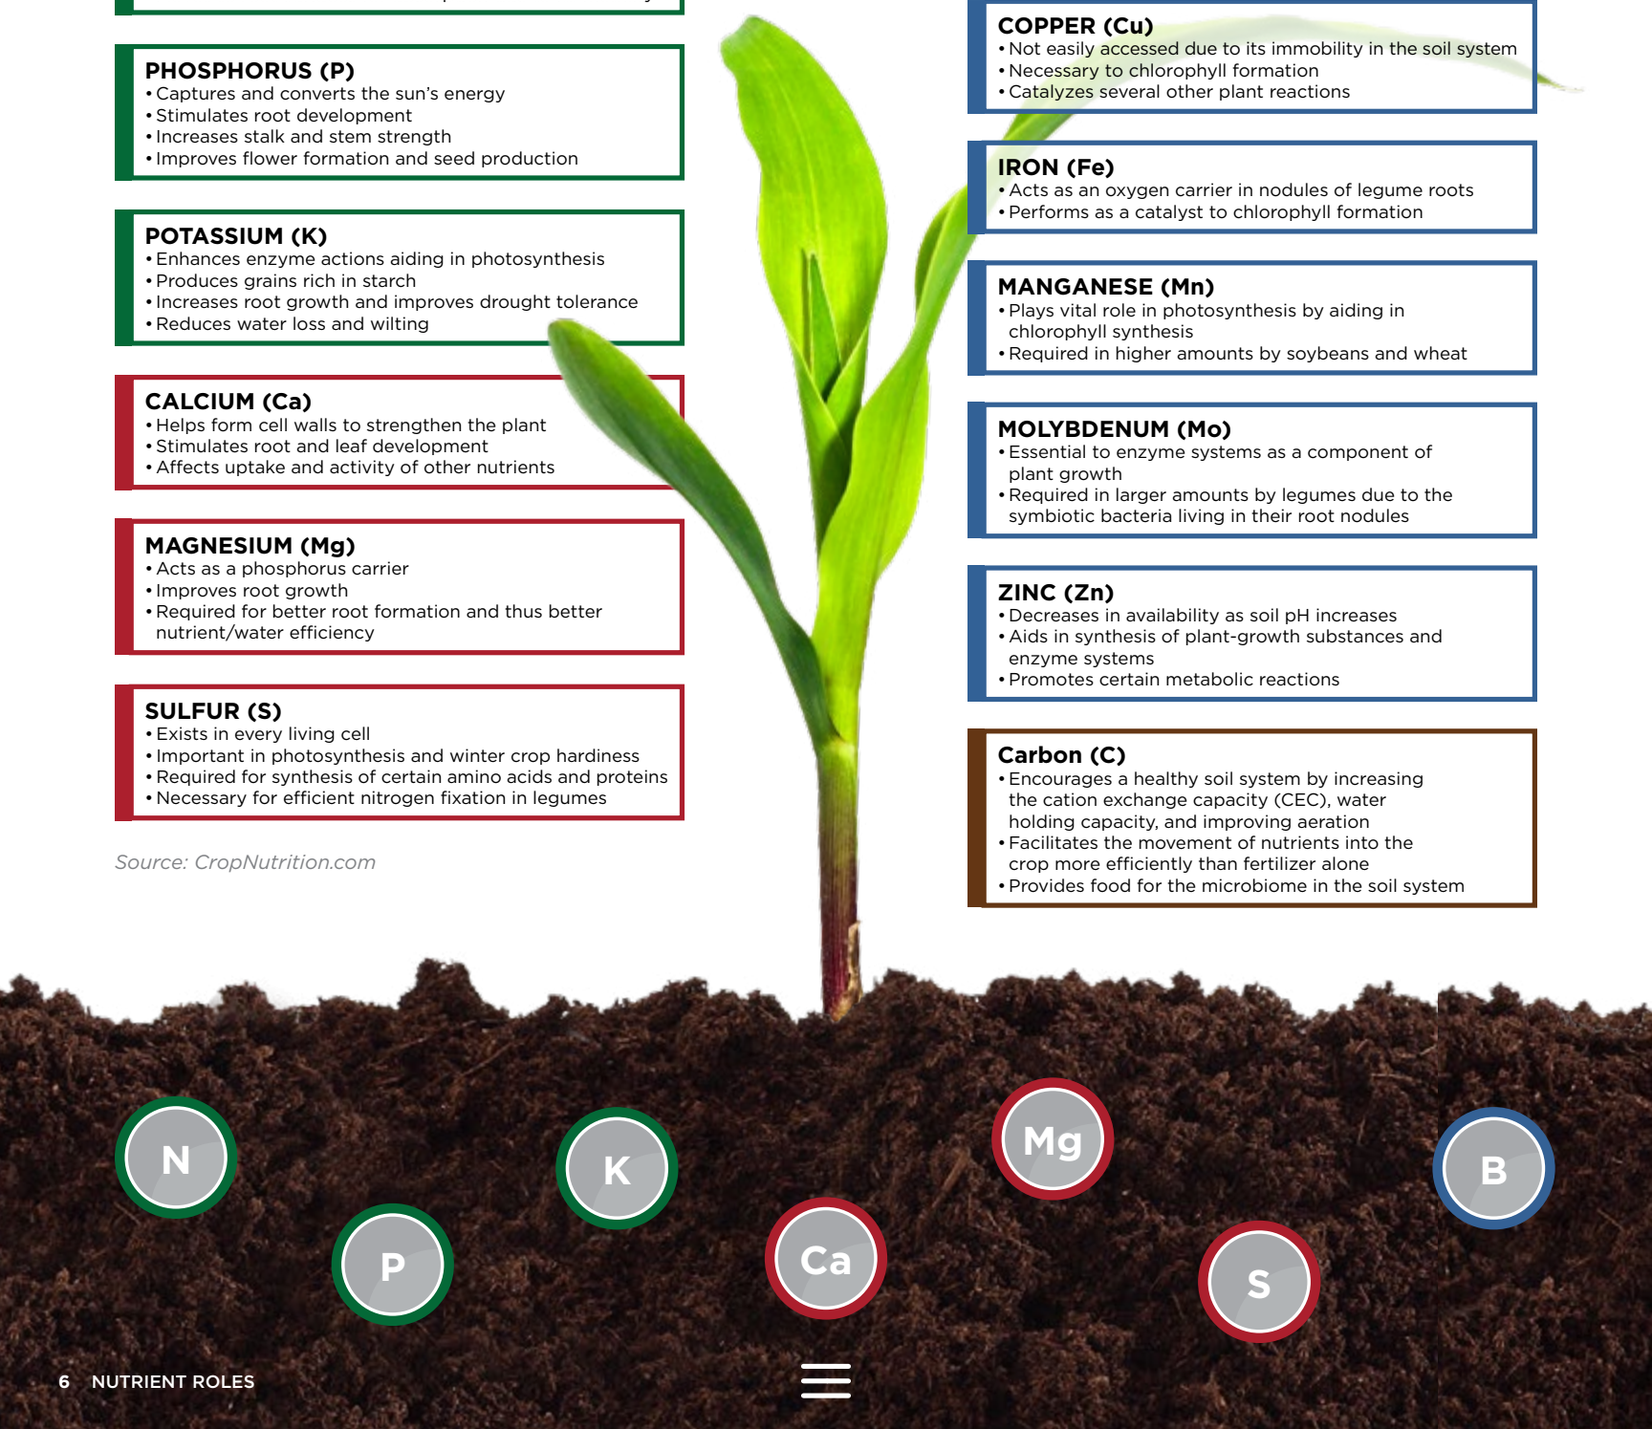
IRON (Fe)
- Acts as an oxygen carrier in nodules of legume roots
- Performs as a catalyst to chlorophyll formation

MANGANESE (Mn)
- Plays vital role in photosynthesis by aiding in chlorophyll synthesis
- Required in higher amounts by soybeans and wheat

MOLYBDENUM (Mo)
- Essential to enzyme systems as a component of plant growth
- Required in larger amounts by legumes due to the symbiotic bacteria living in their root nodules

ZINC (Zn)
- Decreases in availability as soil pH increases
- Aids in synthesis of plant-growth substances and enzyme systems
- Promotes certain metabolic reactions

Carbon (C)
- Encourages a healthy soil system by increasing the cation exchange capacity (CEC), water holding capacity, and improving aeration
- Facilitates the movement of nutrients into the crop more efficiently than fertilizer alone
- Provides food for the microbiome in the soil system



CARBON

THE KEY TO HEALTHY SOIL

Carbon is one of 17 essential elements required by plants for optimal growth.

Carbon is essential for healthy soil, sustainable agricultural production as well as air and water quality. When carbon becomes depleted in the soil system, it leads to a low cation exchange capacity (CEC), increased erosion, reduced water holding capacity, and loss of soil structure.

> **According to the USDA, "The most practical way to enhance soil health today is to promote better management of soil organic matter or carbon (C)."**

Carbon can be applied to fields to offset the depletion caused by increased production and conventional farming practices.

The Andersons provides several products that help to increase organic matter, sequester carbon in the soil, and increase nutrient use efficiency. Each product delivers a unique carbon source to soils and crops, either in the form of humic and fulvic substances, a type of microbial food source, or a robust microbial package.

HIGHLY VERSATILE

EASY TO HANDLE

CLEAN, PURE, TRUE SOLUTIONS

SAME FIELDS, HIGHER YIELDS®

ABOUT PUREGRADE

PureGrade liquid fertilizer is a line of low-salt, chloride-free liquid fertilizer grades that are high in orthophosphates and may be safely used in close proximity to seeds, roots, and foliage for better fertilizer efficiency.

LOW-SALT STARTERS

PureGrade low-salt starters are field proven, trouble free, and seed safe. When placed near the seed, essential nutrients go to work immediately, powering seedlings toward maximum production. The Andersons offers three base grades for low-salt starters: Diamond, GoldStart®, and Premium.

LOW-SALT FOLIARS

The Andersons offers several foliar fertilizers to best meet your needs. Foliar applications should be made prior to stressful physiological plant stages or anytime a crop is recovering from environmental stresses such as nutrient deficiencies, weather extremes, or insect and disease attacks.

SLOW RELEASE NITROGEN

Our slow release nitrogen products provide different release patterns to best fit crop needs. These products can be foliar-applied to correct nitrogen deficiencies and extend the nitrogen release period.

STORAGE AND CLEANING GUIDELINES FOR LOW-SALT FERTILIZER TANKS

AndersonsPlantNutrient.com/Tank-Guidelines

BASE GRADES

Including PureGrade liquid fertilizer in your program will ensure your crop has the nutrients needed to reach its full potential. PureGrade low-salt starters are the best choice for maximizing yield potential.

Diamond, GoldStart, and Premium are the base grades from which our products are formulated. All grades are low salt, non-corrosive, and compatible with most pesticides. These grades provide varying orthophosphate content allowing growers to choose the product that best fits their fertility and investment needs.

DIAMOND BLENDS
100% ORTHOPHOSPHATE

GOLDSTART® BLENDS
80/20 ORTHO/POLYPHOSPHATE

PREMIUM BLENDS
50/50 ORTHO/POLYPHOSPHATE

Power Pass® TECHNOLOGY

Power Pass technology is a dual action patent-pending technology. It not only increases crop performance but also aids in enhancing storability for select low-salt starter fertilizers.

Season Pass® with MicroCarb®

Season Pass® Plus with MicroCarb®

**Ask about including with other Diamond and GoldStart® products*

Season Pass® (3 gal) | Season Pass® (3 gal) with Power Pass® Technology

Research Summary: In a Walton, Indiana trial in 2020, corn plants treated with Power Pass technology were notably larger and one growth stage ahead compared to those without. The plants treated with Power Pass technology had greater emergence, with 2,000 more plants per acre compared to Season Pass alone.

Season Pass®

SEASON PASS WITH MICROCARB®

Season Pass with MicroCarb features essential nutrients and carbon to maximize early-season growth. The addition of carbon increases soil cation exchange capacity, improving nutrient availability. The use of Season Pass with MicroCarb encourages quicker crop emergence, growth, crop maturity, and dry down.

Research Summary (Right): In Ohio in 2022, Season Pass Diamond with MicroCarb was applied at a rate of 5 gal/acre in-furrow. Compared to the untreated check, Season Pass with MicroCarb yielded an 8.3 bu/acre advantage at harvest.

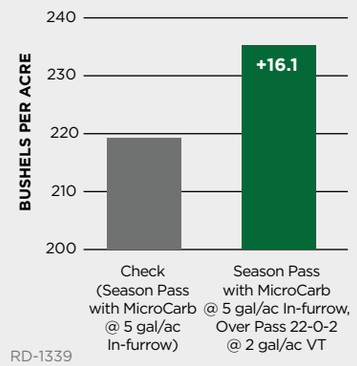
OVER PASS® 22-0-2

Over Pass 22-0-2 + 1.0 S, 0.5 B is a chloride-free foliar product that contains 25% slow release nitrogen to extend absorption and minimize any leaf interaction. The slow release nitrogen provides 10-14 days of nitrogen feeding. Over Pass 22-0-2 also contains potassium, sulfur, and boron to enhance overall crop performance.

Research Summary (Right): In 2020 in Ohio, Over Pass 22-0-2 was applied to corn at a rate of 2 gal/acre at the VT growth stage. A yield increase of 16.1 bu/acre was observed.

OVER PASS 22-0-2 | CORN



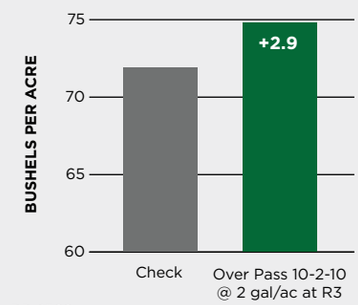
RD-1339

OVER PASS® 10-2-10

Over Pass 10-2-10 + 0.5 B, 0.25 Mn contains 25% slow release nitrogen to feed the crop for 10-14 days. Over Pass 10-2-10 aids the plant during the stressful reproductive stage of bloom. In addition to the nitrogen, Over Pass 10-2-10 also provides potassium, boron, and manganese which are vital for crop production.

Research Summary (Right): In 2022 in South Dakota, Over Pass 10-2-10 at a 2 gal/acre rate was applied at the R3 growth stage on soybeans. At harvest, the treatment yielded a 2.9 bu/acre increase compared to the untreated check.

OVER PASS 10-2-10 | SOYBEANS



RD-1368

KORRECT®

Korrect is a highly available, mild form of potassium which is well suited for foliar or soil application. Korrect is safe for foliar application without risk of burn. It contains a natural organic carrier which enhances its receptivity by plants.

Research Summary (Above): In 2022 in Minnesota, Korrect was foliar applied to sugar beets at a rate of 1 gal/acre. The application of Korrect was made at canopy closure and again 30 days prior to harvest. The foliar application resulted in an increase of 543.2 lbs of recoverable sugar per acre at harvest compared to the check.

HIGHLY VERSATILE

EASY TO HANDLE

CLEAN, PURE, TRUE SOLUTIONS

HARNESS THE POWER OF MICROSOLUTIONS

ABOUT MICROSOLUTIONS

MicroSolutions micronutrients are compatible with different types of fertilizers, many herbicides, and insecticides. These high-efficiency products are versatile, easy to handle, and offer superior uptake. Our products are made from the highest quality raw materials.

MICRONUTRIENT-BASED SOLUTIONS

Micronutrient-Based Solutions are proprietary products designed to meet specific needs of crops in the prevention or correction of nutrient deficiencies.

PLANT AND SOIL HEALTH SOLUTIONS

Plant and Soil Health Solutions are compounds, microorganisms, and substances designed to enhance plant and soil health. When applied, they provide fulvic and humic acid, sugar, microbials, or other solutions to crops to improve crop vigor, quality, and tolerance to stress.

EDTA CHELATED SOLUTIONS

EDTA Chelated Solutions can be soil or foliar applied and are designed for use in liquid fertilizers and suspensions. They are compatible with most fungicides, insecticides, and herbicides.

CITRIC CHELATED MICRONUTRIENTS

Citric Chelated Micronutrients are designed for soil or foliar application. They are compatible with most herbicides, insecticides, and agricultural chemicals that may be used with liquid fertilizers.

POLY-COMPATIBLE SOLUTIONS

Poly-Compatible Solutions are designed to mix with ammonium polyphosphate (APP) solutions and be applied broadcast pre-plant or at planting in 2x2 applications.

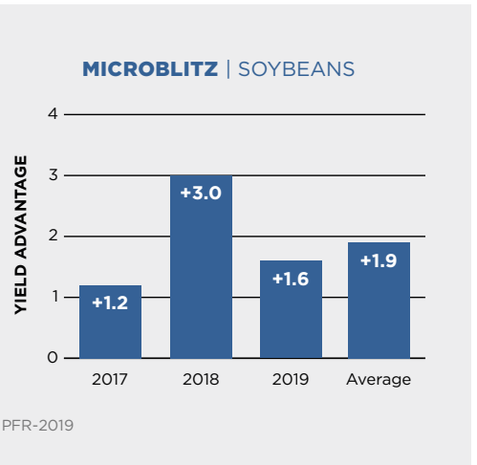
GRANULAR MICRONUTRIENTS

Granular micronutrients are small, solid particles containing essential micronutrients for plant growth, such as iron, manganese, copper, zinc, boron, molybdenum, or even humic acid. Although small, micronutrients can make a significant impact on overall plant and soil health.

MICROBLITZ®

MicroBlitz aids in the relief of plant stress. It is a micronutrient blend including fulvic acid for enhanced efficiency, and it may be applied with herbicides.

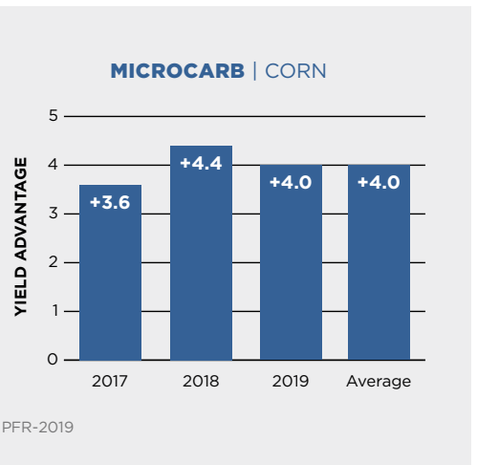
Research Summary (Right): In the Beck's Practical Farm Research trials, MicroBlitz was foliar-applied to soybeans at a rate of 1 qt/acre at the R1 growth stage. This treatment was tested over a three year period. Each year, the treatment yielded a positive advantage over the check, earning MicroBlitz the PFR Proven stamp.



MICROCARB®

MicroCarb contains carbon substances from vegetable origin that increase soil cation exchange capacity, improving nutrient availability. MicroCarb should be used at planting or foliar applied early in the season for maximum agronomic benefit.

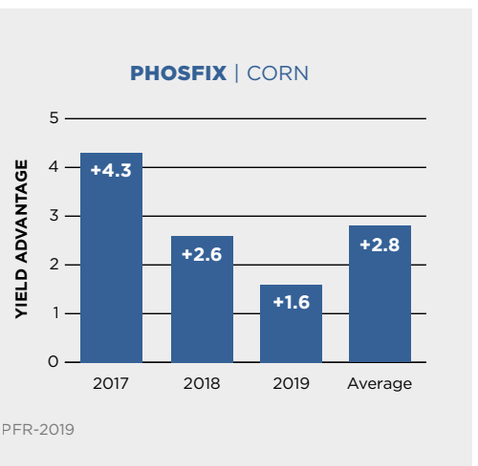
Research Summary (Right): In the Beck's Practical Farm Research trials, MicroCarb at a rate of 1 qt/acre was applied with starter in-furrow. This treatment was tested over a three year period. Each year, the treatment yielded a positive advantage over the check, earning MicroCarb the PFR Proven stamp.



PHOSFIX®

Phosfix is a powerful combination of macro and micronutrients with growth and plant enhancers that improve yield and profit by enhancing crop vigor and crop health. Phosfix contains plant growth regulators including cytokinin, gibberellic acid, and auxins that help with cell division, cell elongation, and cell differentiation, respectively.

Research Summary (Right): In the Beck's Practical Farm Research trials, Phosfix was foliar-applied to corn at a rate of 1 pt/acre at the V4 growth stage. This treatment was tested over a three year period. Each year, the treatment yielded a positive advantage over the check, earning Phosfix the PFR Proven stamp.

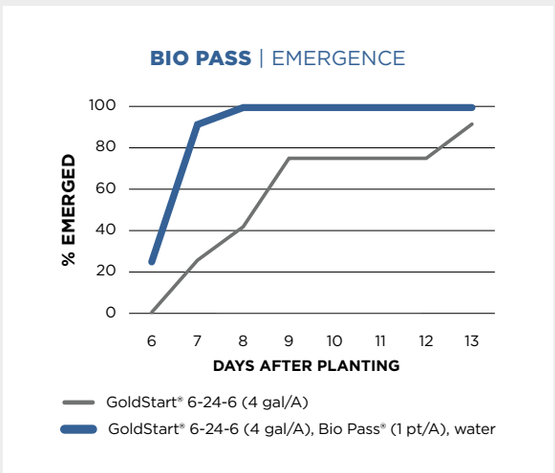


BIOLOGICAL PRODUCT LINE-UP

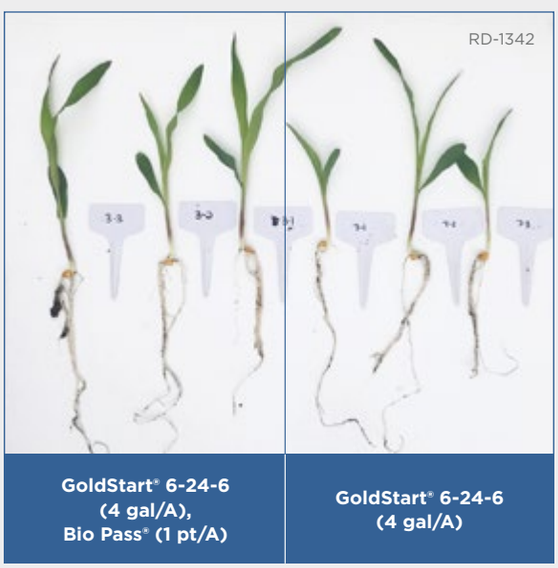
2 YEAR SHELF LIFE • CONSISTENT FIELD PERFORMANCE • 300 BILLION CFUS

BIO PASS®

Bio Pass works in synergy with a grower's liquid starter fertilizer program for corn and wheat.



Research Summary (Above): In a greenhouse study, the treatment with GoldStart® 6-24-6 liquid fertilizer and Bio Pass emerged 5 days earlier and more uniform than the starter alone.



Research Summary (Above): When Bio Pass was added to liquid starter fertilizer, the average root mass of the plants (left) were more robust, and the plants had an average dry plant mass that was double the mass of the starter alone (right). This photo was taken 15 days after emergence.

BIO PASS® LG

Bio Pass LG is designed to support soybean and other legume crops' growth and season-long nutrient needs.

BIO REVERSE®

Bio Reverse is a specially selected package of soil-borne microbes chosen for their ability to accelerate crop degradation and composting, thereby significantly reducing residue and releasing nutrients back to the soil.

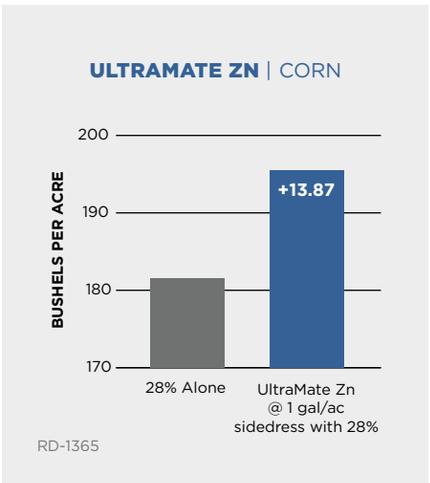
Research Summary (Above): In this photo, the corn stalks on the left were treated with 1 pt/acre of Bio Reverse in the fall post-harvest. The following spring, the stalks treated with Bio Reverse had more residue breakdown compared to the untreated check on the right.

For more information on The Andersons Biological Product Line-Up, visit: **AndersonsPlantNutrient.com/Biologicals**.

UltraMate® Zn

UltraMate Zn is a sulfonated potassium humate liquid with the benefits of zinc. It completely mixes when added directly to liquid fertilizer, micronutrient, or pesticide formulations over a wide range of pH values. UltraMate Zn allows plants to utilize N, K, Zn, and other micronutrients more efficiently, reducing leaching and improving soil structure.

Research Summary (Right): In 2022 in Nebraska, UltraMate Zn was applied to corn at sidedress at a rate of 1 gal/acre with 28%. At harvest, the treatment yielded a 13.87 bu/acre advantage compared to 28% alone.



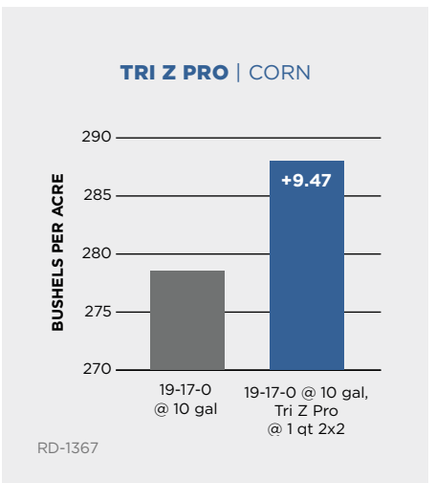
AGRO MIX

MicroSolutions Agro Mix is a micronutrient package intended for the prevention and/or correction of boron, copper, iron, manganese, molybdenum and zinc deficiencies. It can be applied alone or in combination with compatible agriculture chemicals or liquid fertilizers, including those containing 100% orthophosphate and suspensions.

TRI Z® PRO

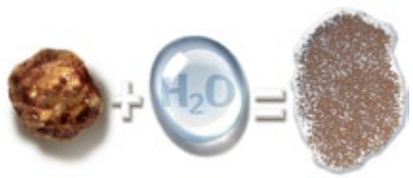
Tri Z Pro is a powerful combination of nitrogen, sulfur, zinc, and ammonium acetate suitable for starter fertilizer application. With three sources of zinc, Tri Z Pro is formulated to provide immediate availability and sustained release of zinc for the crop. The unique and synergistic combination of zinc and ammonium acetate stimulates the plant to generate a more extensive root system to better utilize available nutrients and soil moisture.

Research Summary (Right): In 2022 in Nebraska, Tri Z Pro at a rate of 1 qt/acre with 19-17-0 was applied in 2x2 placement. At harvest, the treatment yielded 9.4 bu/acre advantage compared to 19-17-0 alone.



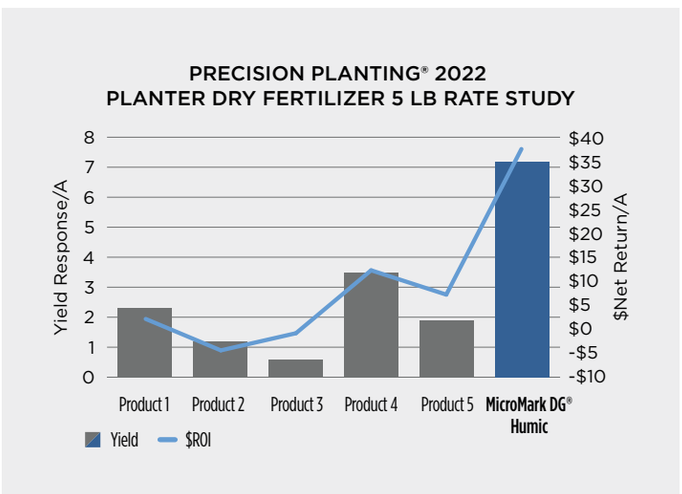
MicroMark® DG B

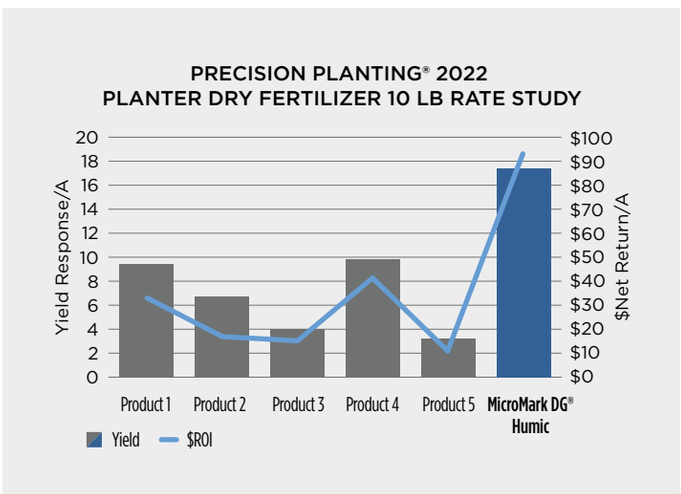
MicroMark® DG B is a granular micronutrient product featuring The Andersons Dispersing Granule (DG) Technology. With DG technology, particles are efficiently broken down through hydrolysis, increasing the efficacy of nutrients. MicroMark DG B contains a unique blend of calcium, sulfur, boron, manganese, and zinc. This blend of nutrients was created to optimize plant health.



MicroMark® DG Humic

MicroMark DG Humic contains a unique blend of calcium, sulfur, manganese, and zinc. This blend of nutrients was created to optimize plant health. MicroMark DG Humic also includes humic acid which is a natural chelator of micronutrients and also has been shown to improve soil health.





2022 PRECISION PLANTING® PTI RESULTS: PLANTER APPLIED MICRONUTRIENT STUDY

Precision Planting conducted this study to evaluate yield and net return of dry micronutrient fertilizer products at planting. At the 5 lb/A rate, MicroMark® DG Humic offered the highest yield gains of 7.2 bu/A with positive net returns of $37.70/A. As rates climbed to 10lbs/A, all products resulted in positive yield gain and net return. MicroMark DG Humic again offered the highest yield gains of 17.4 bu/A with positive net returns of $93.40/A.

SELECT NUTRIENTS

FLEXIBLE APPLICATION

IMMEDIATELY AVAILABLE

CLEAN , PURE, TRUE SOLUTIONS

CORRECT DEFICIENCIES TO IMPROVE YIELD

ABOUT SELECT NUTRIENTS

Select Nutrients improve the structure and strength of your crop by correcting or preventing nutrient deficiencies, ultimately maximizing yield. These products have been manufactured and selected for efficacy and performance. Select Nutrients can be soil or foliar applied and are compatible with a wide variety of crop protection products for versatile and flexible application timing.

LIQUID POTASSIUM PRODUCTS

Whether soil or foliar applied, the Eezy® K line delivers specific forms of potassium and sulfur for optimal absorption and application.

LIQUID CALCIUM PRODUCTS

Highly clean, pure, true solutions that are totally and immediately available to the plant. Liquid Calcium Products contain no suspended particles, chlorides, or ammonium.

LIQUID SULFUR PRODUCTS

Liquid Sulfur Products have been shown to produce more protein at higher quality, reduce the build-up of nitrates, improve soil structure, and increase water infiltration.

LIQUID BORON PRODUCTS

Boron 10% prevents and corrects deficiencies and may be used on all crops. It is designed for use with liquid fertilizers and Eezy Cal 10% liquid calcium.

SOIL AMENDMENTS

HIGH-QUALITY

NEXT-GENERATION TECHNOLOGY

EASY HANDLING

OMRI LISTED
For Organic Use

The OMRI Listed® Seal assures the suitability of a product for certified organic production, handling, and processing. As best practice, the farmer should confirm all inputs are approved by their organic certifier, prior to use.

START WITH YOUR SOIL

ABOUT SOIL AMENDMENTS

Soil Amendments promote plant health and protect genetic yield potential by building soil structure. As soil is the basis for the crop's success, our products improve the physical properties of soil, such as tilth, aeration, water infiltration, drainage, and moisture holding capacity.

HUMIC SOLUTIONS

Our humate-based soil amendments, including Humic DG™, Black Gypsum DG®, and K-Mate SG™, represent the latest in humic acid nutrient delivery. We offer a complete line of technologically-advanced, easy-to-handle products, superior to others on the market today.

LIMESTONE/GYPSUM BASED PRODUCTS

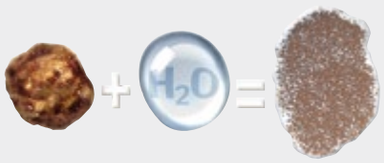
Our limestone/gypsum pelletized products are manufactured from natural, high-quality calcitic or dolomitic limestones and gypsums that are pulverized to a flour-like powder, then formed into fertilizer-sized granules designed to dissolve in moisture.

DISPERSING GRANULE TECHNOLOGY

DISPERSIBLE: The Andersons Dispersing Granule (DG) technology creates spherical, dust-free, and ultra-dry particles. These granules rapidly disperse upon contact with soil moisture, creating tens of thousands of microparticles, which greatly increases surface area and allows for faster breakdown and availability of the applied substances.

SPREADABLE: DG granules can be spread evenly and consistently through all types of application equipment. Other granular competitor products are dusty, non-uniform, and contain up to 20% moisture, making them hard to handle and difficult to spread.

BLENDABLE: DG granules are designed to be ultra-dry, which allows for successful blending with all types of dry fertilizers, including urea.

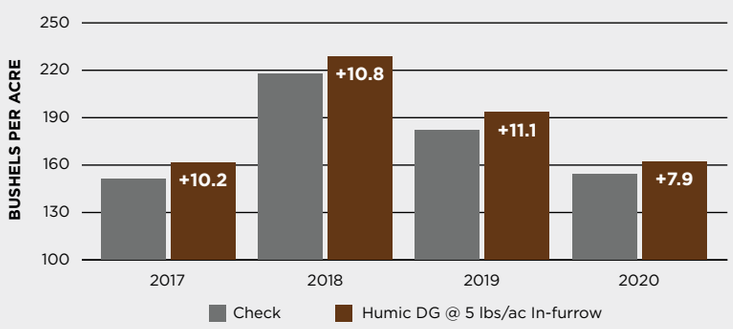


Humic DG™

Humic DG granules contain 70% humic acid and 10% humic acid precursor. DG technology creates a dust-free, spherical, ultra-dry particle that rapidly disperses into thousands of microparticles upon contact with moisture. The increased surface area of Humic DG granules, when compared to screened humate, creates greater availability to the plant. It performs in a wide range of conditions and soil types, independent of application method, and features dual carbon sources that are unique to The Andersons granular humic products. Humic DG contains the full spectrum of humic substances: fulvic acid, humic acid, and humin, as well as humic acid precursor.

Research Summary (Below): Humic DG has been tested over the course of 4 years in organic corn production. In these trials, Humic DG was applied at a rate of 10 lbs/acre in-furrow. On average, the treatment yielded a 10.03 bu/acre advantage compared to the check.

HUMIC DG | ORGANIC CORN



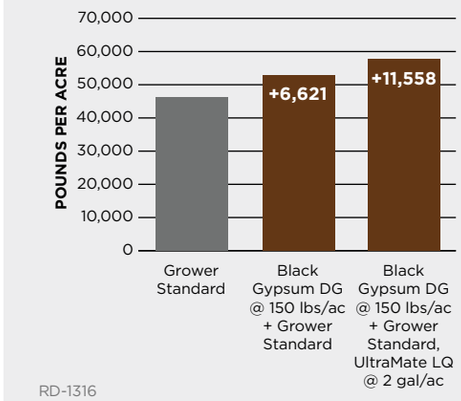
RD-1329, RD-1314, RD-1287, RD-1346, RD-1349

Black Gypsum DG®

Black Gypsum DG granules are homogenous and combine natural gypsum and humic substances to form a unique bioamendment. DG technology creates a dust-free, spherical, ultra-dry granule that rapidly disperses into thousands of microparticles upon contact with moisture. These microparticles deliver calcium, sulfur, and carbon directly into the soil. The DG technology allows for reduced application rates compared to other agricultural-grade gypsum products, which makes this an economical soil amendment.

Research Summary (Right): In 2018 in Wisconsin, Black Gypsum DG was applied to potatoes. At harvest, the treatment yielded a 6,621 pounds/acre advantage compared to the check. When both Black Gypsum DG and UltraMate LQ were applied, a yield increase of 11,558 pounds/acre was observed.

BLACK GYPSUM DG | POTATOES

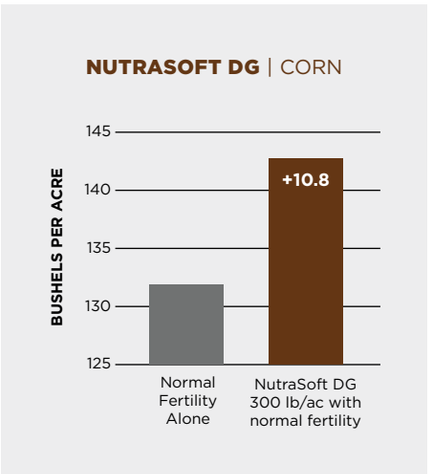


RD-1316

NutraSoft® DG

NutraSoft DG pelletized gypsum can be applied anytime on all soil types and pH ranges. It blends easily with fertilizer and has a low dust level. NutraSoft DG pelletized gypsum's calcium is 150 times more soluble than limestone. It is an excellent source of calcium and sulfur without raising the soil pH. The addition of NutraSoft DG pelletized gypsum will loosen compacted soils quickly and help balance a soil's calcium:magnesium ratio.

Research Summary (Right): In Illinois on corn, 300 lbs/ac of NutraSoft DG was applied with a normal fertility program and resulted in an average 10.8 bu/ac yield increase.

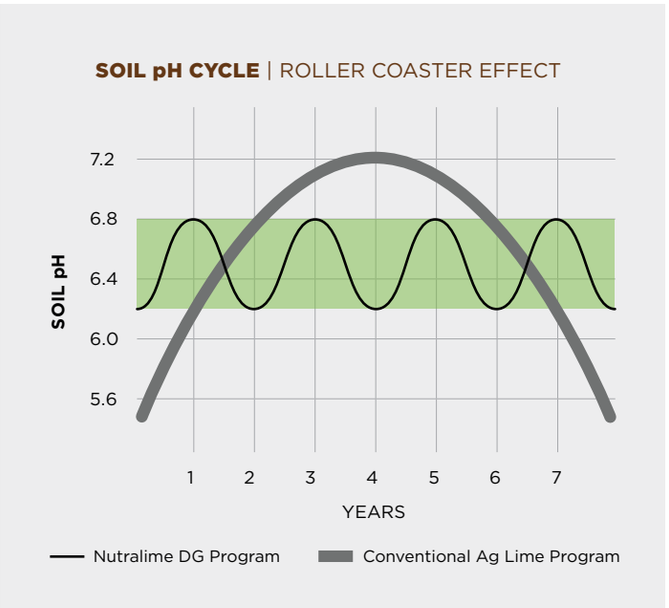


NutraLime® DG

(AVAILABLE AS HI-CAL OR HI-MAG)

NutraLime DG Pelletized Limestone provides an in-season soil acidity adjustment in the application zone. It is available in both a high-calcium (Hi-Cal) and high-magnesium (Hi-Mag) formulation. Calcium and magnesium are plant-available within the current growing season to produce top yields. Proper pH provides the most efficient environment for nutrient uptake.

Using frequent, low rate applications of NutraLime DG pelletized limestone is an excellent tool for flattening the pH curve and preventing the "roller coaster" effect caused by high, less frequent applications of conventional ag lime.



PRODUCT	CHARACTERISTICS	PERFORMANCE	TYPICAL RATES
Competitor's Ag Limestone	• Less soluble powder • Uneven, dusty application • Lower grade	• May take multiple years to adjust pH • Provides calcium only	1000-2000 lbs/A
NutraLime DG (Hi-Cal) **NutraLime DG (Hi-Mag)**	• Pelletized limestone • Exceptional spreadability and field coverage • Easy to handle • Uniform sizing	• In-season pH neutralization • In-season nutrient availability • Calcium and magnesium formulation options	300-500 lbs/A

Right hand: *NutraLime DG*
Left hand: *Competitor's ag limestone powder*

ORGANIC NUTRIENTS

HIGH QUALITY

NEXT-GENERATION TECHNOLOGY

ENVIRONMENTALLY FRIENDLY

ENHANCED ROOT UPTAKE

ACCESSIBLE ORGANIC NUTRIENTS TO DRIVE SUCCESS

Organic crops have an intense need for products that not only feed the plant, but also feed the soil. The Andersons offers a range of crop nutrients and soil amendments approved for organic use. We are actively researching and developing new products to expand our OMRI listed portfolio and better serve organic nutrient needs.

The OMRI Listed® Seal assures the suitability of a product for certified organic production, handling, and processing. As best practice, the farmer should confirm all inputs are approved by their organic certifier, prior to use.

OMRI LISTED
For Organic Use

PLAN A SEASON LONG ORGANIC APPROACH

Get ahead with solutions specifically created by agronomists at The Andersons for organic corn and potatoes. Our team identified what crops need throughout the growing season and created a program designed to meet nutritional needs and maximize yields. Download The Andersons High Yield programs for organic corn, potatoes, and more at **AndersonsPlantNutrient.com/HighYield**.

14-0-0 WATER SOLUBLE

The Andersons 14-0-0 is an organic, water-soluble nitrogen fertilizer created from plant-based proteins. 14-0-0 Water Soluble can be used on a wide variety of organic crops including fruits, vegetables, and row crops as part of a fertilizer program.

Fulvic **LQ**™

Fulvic LQ is a high purity organic fulvic acid. Fulvic LQ's clearer color compared to other carbon substances enhances its user-friendliness and compatibility. Fulvic LQ's unique properties increase bioavailability of the nutrients it accompanies in the tank and drastically increase absorption into the plant.

Research Summary (Right): In 2022 in Indiana, Fulvic LQ was applied in 2x2 placement at a rate of 1qt/acre. As a result of the application, the corn had a much larger root system than the untreated check.

Untreated Check	Fulvic LQ™ (1 qt/A) 2x2

ICE VISE®

LIQUID ICE MELT

OUTPERFORMS

Ice Vise melts over 35% more ice at -4°F than the leading liquid deicer.

- NO TRACKING INDOORS
- PROFESSIONAL GRADE
- SAFE FOR TURF AND PLANTS

Ice Vise is a professional grade, chloride-free liquid ice melt designed to be applied to high traffic areas around commercial or residential locations including sidewalks, ramps, and steps. Applying Ice Vise during or after a winter weather event will help to deice these surfaces, providing a safer environment for walking. Ice Vise's chloride-free formula is the safest ice melt option for interior surfaces.

Available packaging sizes: 2x2.5 gallon, 35 gallon drum, and 275 gallon tote

For more information, visit AndersonsPlantNutrient.com/IceVise

OUR MISSION

We firmly believe that our Company is a powerful vehicle through which we channel our time, talent, and energy in pursuit of the fundamental goal of serving God by serving others. Through our collective action, we greatly magnify the impact of our individual efforts to:

- Provide extraordinary service to our customers
- Help each other improve
- Support our communities
- Increase the value of our Company
