## Product Information

Derived from low-rank coal Humalite (a weathered form of sub-bituminous coal), this product is a humic extract designed for starter fertilizer programs, top-dressing, and irrigation systems. This is a great product for blending with UAN and stabilizing Nitrogen. It may be applied as a stand-alone soil conditioner or used for dry fertilizer impregnation. When applied according to directions, it may help improve soil structure and support nutrient uptake and availability while contributing to improved moisture retention, soil pH balance, and cation exchange capacity.
